

Installing and using Python LinkChecker

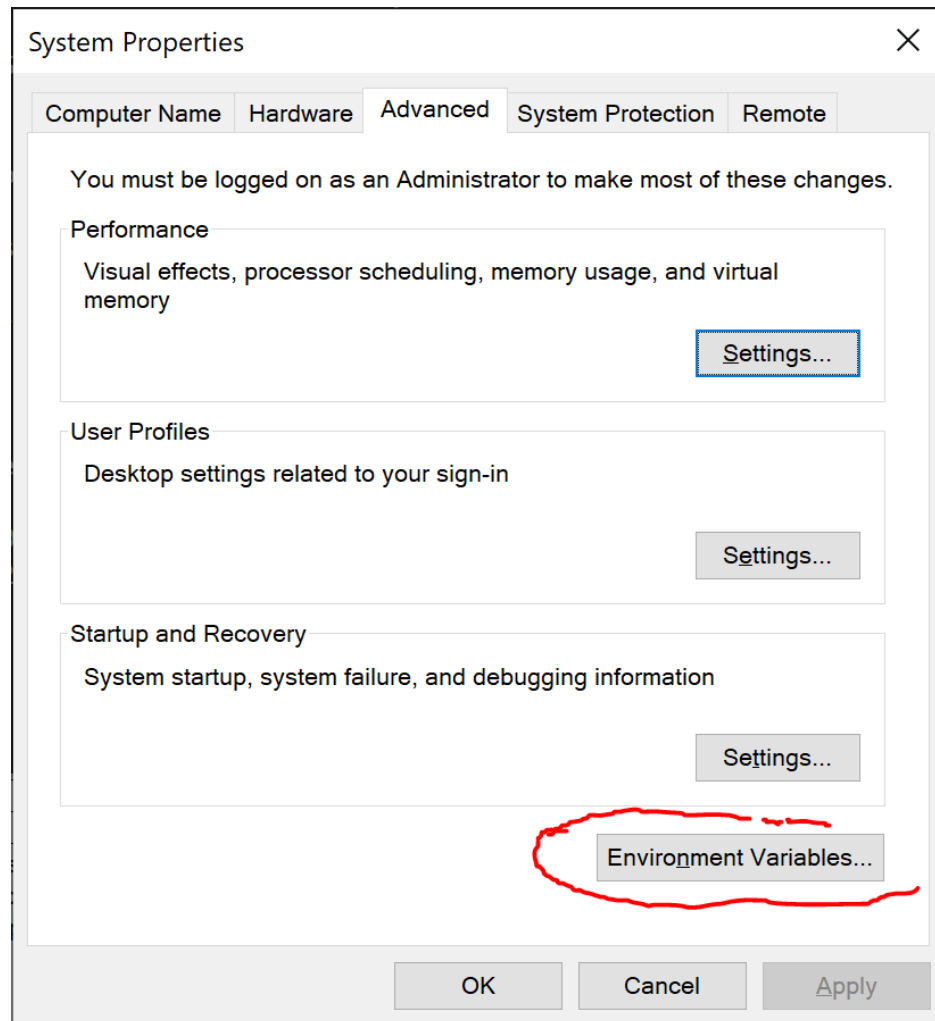

Prerequisites

- Download Python 3.11.2 (<https://www.python.org/downloads/>)
- Turn off Zscaler (password = disableMe!)
- Add a new Path:

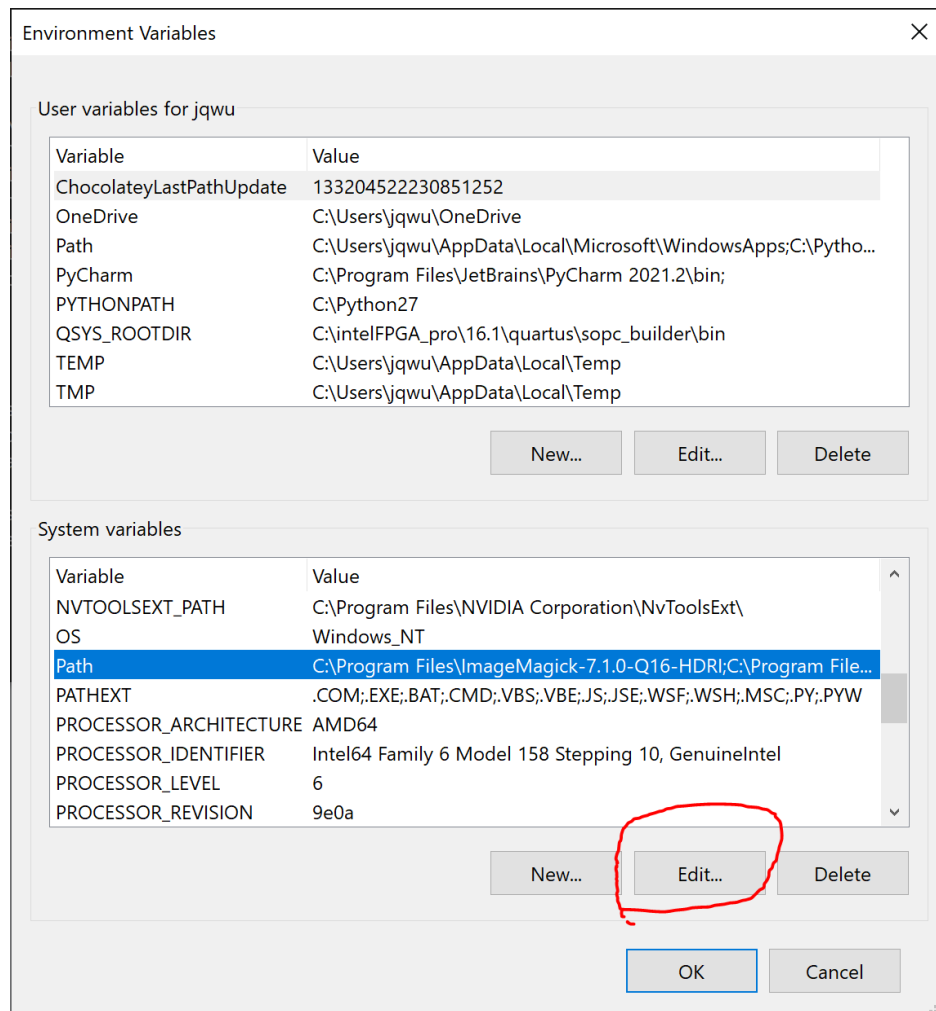

1. Open **Edit the system environment variables**.

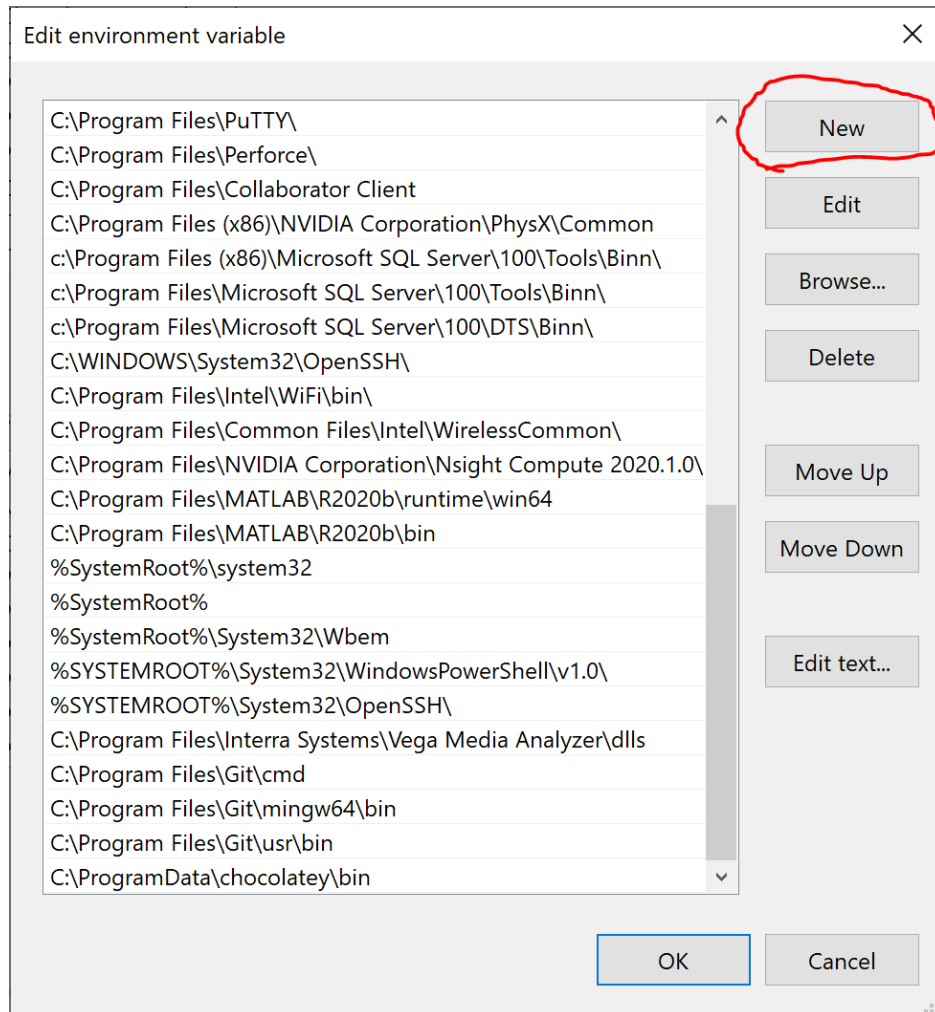

2. Click on **Environment Variables**.

3. Under **System Variables** select **Path** and click **Edit**.

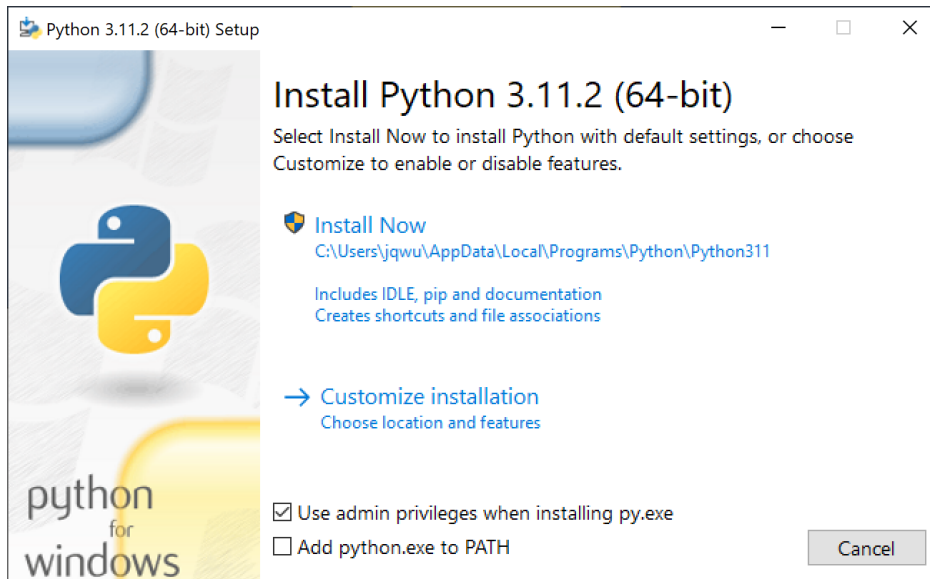

4. Click **New** to add a new path.
5. Enter C:\Program Files\Python311\Scripts.
6. Click **OK**.

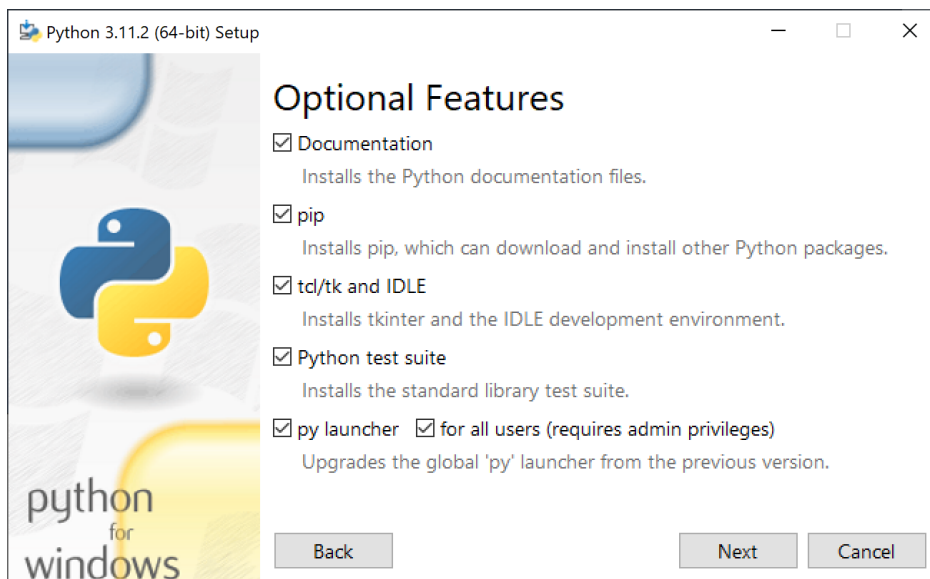

Installing Python LinkChecker

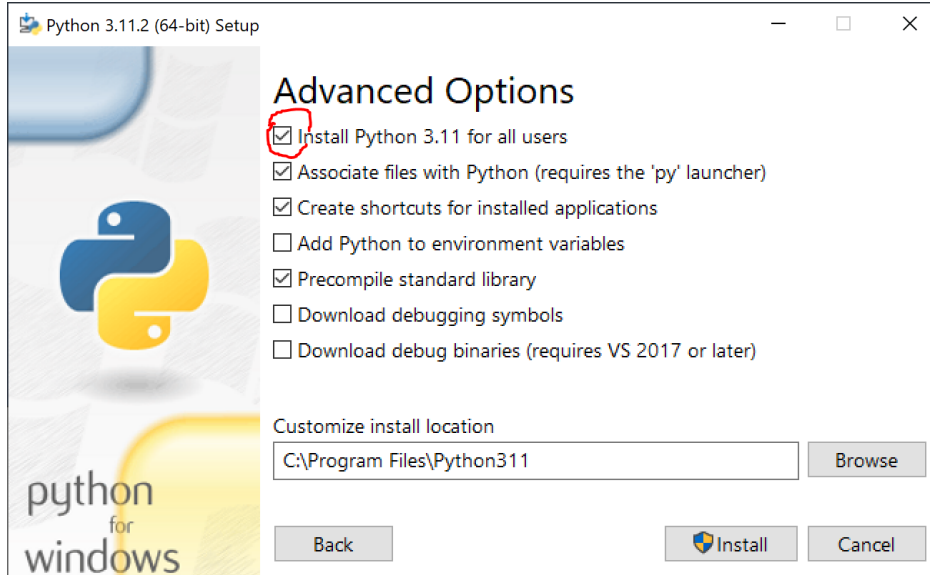

1. Run *python-3.11.2-amd64.exe*.
2. Click **Customize installation** and check **Use admin privileges when installing py.exe**.

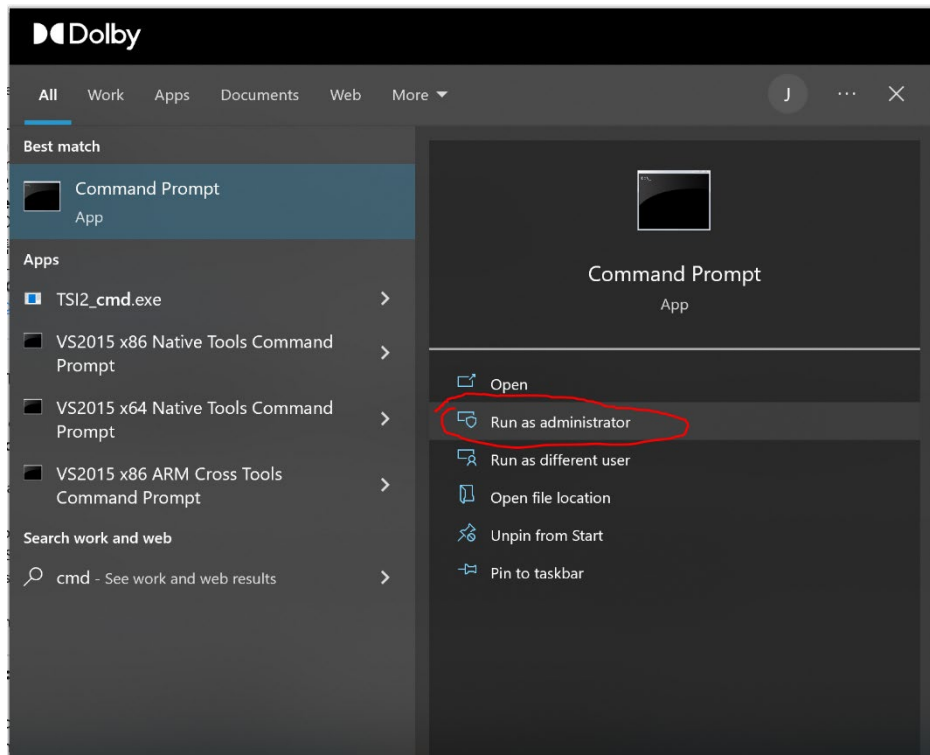

3. Click **Next**.

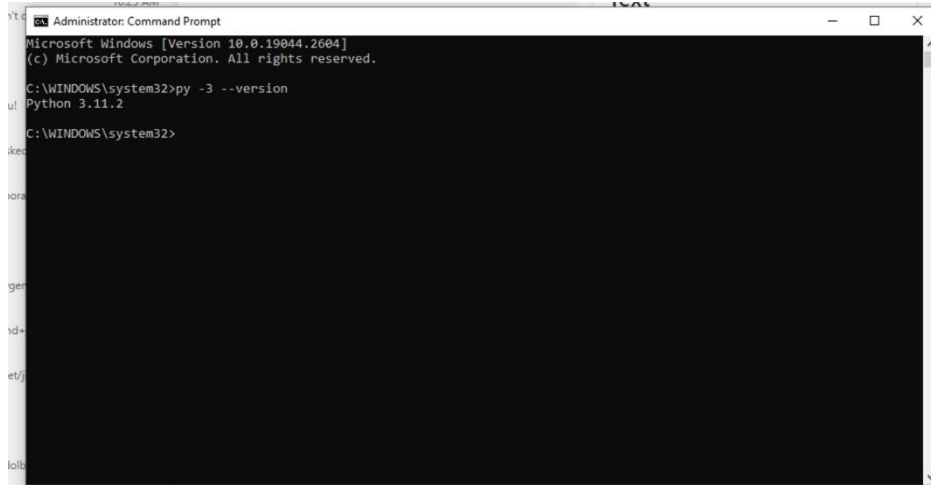

4. Under Advanced Options, check **Install Python 3.1.1 for all users** and click **Install**.

5. Once the installation is complete, open a command prompt and click **Run as administrator**.

6. In the command prompt window, enter *py -3 --version*.

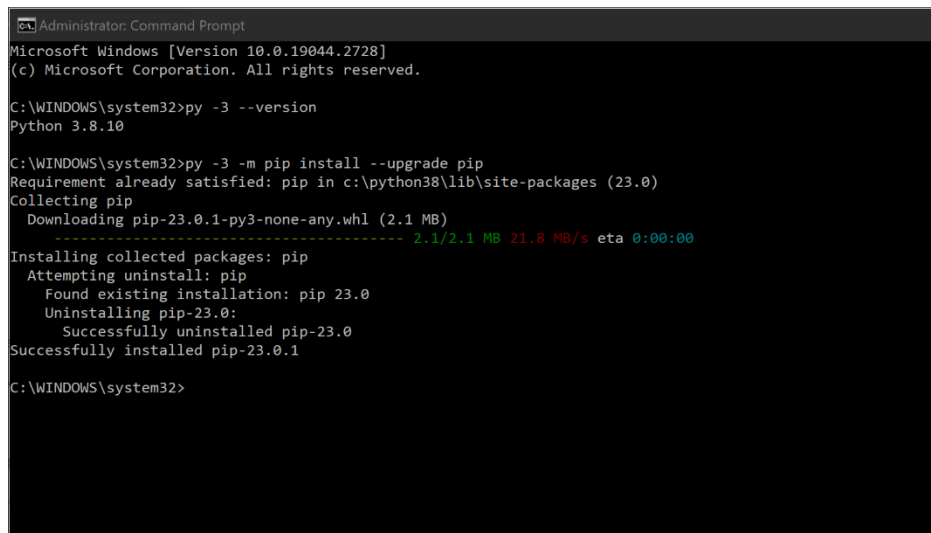

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.19044.2604]
(c) Microsoft Corporation. All rights reserved.

C:\WINDOWS\system32>py -3 --version
Python 3.11.2

C:\WINDOWS\system32>
```

Python 3.11.2 displays.

7. Enter *py -3 -m pip install --upgrade pip*.

```
Administrator: Command Prompt
Microsoft Windows [Version 10.0.19044.2728]
(c) Microsoft Corporation. All rights reserved.

C:\WINDOWS\system32>py -3 --version
Python 3.8.10

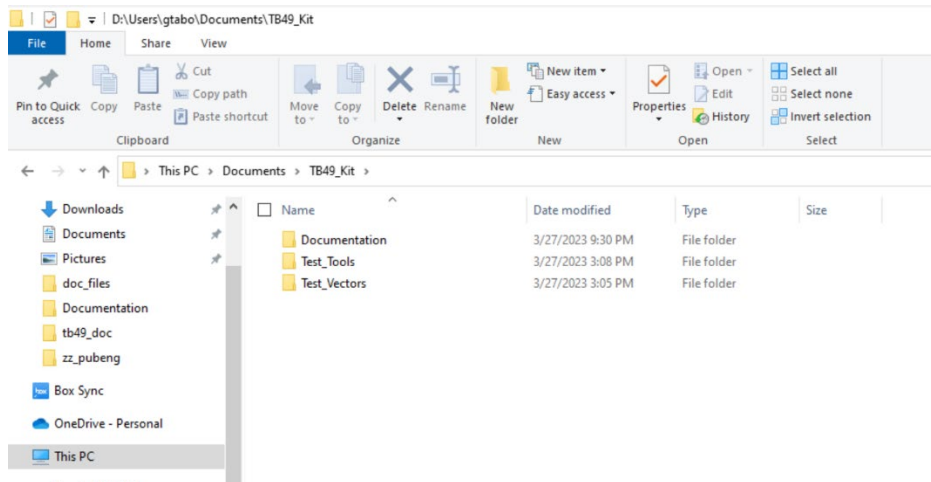

C:\WINDOWS\system32>py -3 -m pip install --upgrade pip
Requirement already satisfied: pip in c:\python38\lib\site-packages (23.0)
Collecting pip
  Downloading pip-23.0.1-py3-none-any.whl (2.1 MB)
    ----- 2.1/2.1 MB 21.8 MB/s eta 0:00:00
Installing collected packages: pip
  Attempting uninstall: pip
    Found existing installation: pip 23.0
    Uninstalling pip-23.0:
      Successfully uninstalled pip-23.0
Successfully installed pip-23.0.1

C:\WINDOWS\system32>
```

Successfully installed pip-23.0.1 displays.

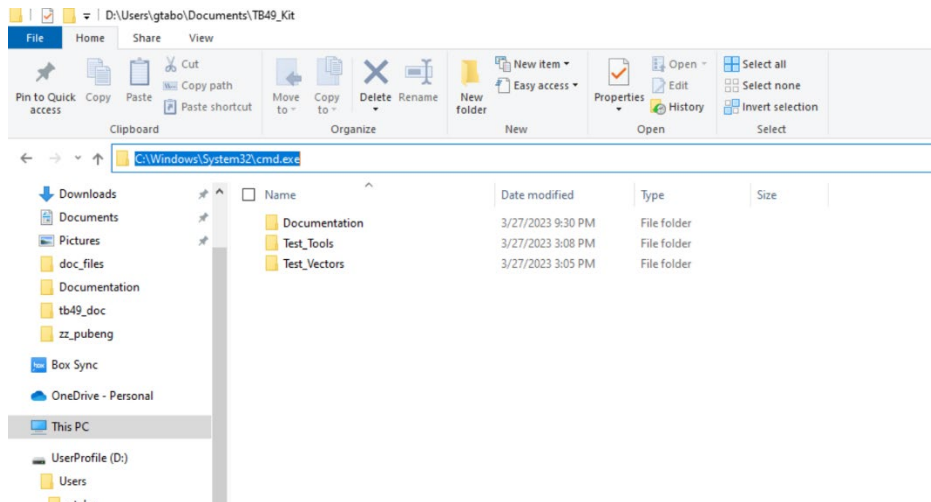

Setting up your test environment

- Set up your test environment on your machine
- Make sure you have all the documents and folders in the test environment so that all links are verified

Running LinkChecker

1. Turn off Zscaler (disableMe!).
2. Open Windows Explorer and navigate to your test environment.
3. Make sure to be in the root folder of the test environment.
4. Enter `cmd` in the address bar.

5. In the command prompt, enter `linkchecker Documentation\help_files\index.html -F html -check-extern` in the command prompt.

[illegible]

The number of links checked and the number of errors found are listed.
